

Why Invest in YBTC?

Income Potential: YBTC seeks to generate weekly income through a covered call strategy on bitcoin*.

Exposure to Bitcoin: YBTC offers upside exposure to bitcoin*, subject to a weekly cap.

Actively Managed: YBTC implements a covered call strategy, saving investors the time and expense of trading options themselves.

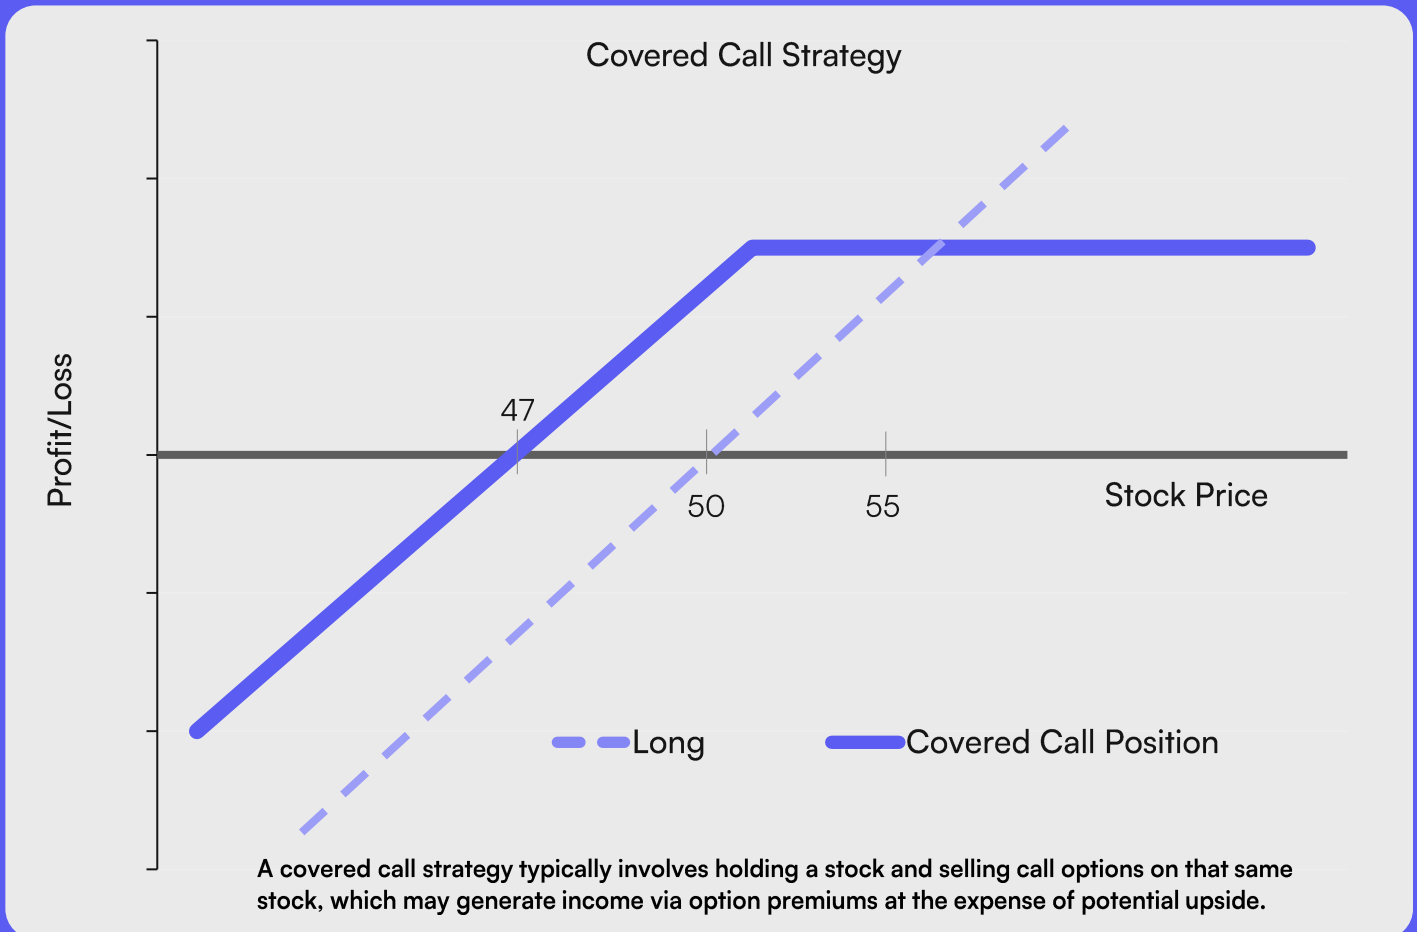

Fund Details

Fund Ticker	YBTC
Exchange	CBOE
CUSIP	77926X502
Expense Ratio	0.95%
AUM	\$80.6MM
Shares Outstanding	1,670,000
Inception Date	1 / 18 / 2024
ETF Options Available	Yes

**The Fund does not invest directly in bitcoin. The Fund does not invest in, or seek direct exposure to, the current "spot" or cash price of bitcoin. Investors seeking direct exposure to the price of bitcoin should consider an investment other than the Fund. The fund seeks to provide exposure to the price return of one or more exchange-traded funds that hold bitcoin and whose shares trade on a U.S.-regulated securities exchange (each, a "Bitcoin ETF," and collectively, the "Bitcoin ETFs"). In effectuating its investment strategy, the Fund will purchase and sell a combination of call and put option contracts that utilize a Bitcoin ETF or an index of Bitcoin ETFs (the "Bitcoin ETF Index") as the reference asset ("Bitcoin ETF Options"). The fund is not suitable for all investors and involves a high degree of risk.*

Overview

The Roundhill Bitcoin Covered Call Strategy ETF (“YBTC”) is the first U.S. listed bitcoin covered call strategy ETF. The Fund offers exposure to bitcoin*, subject to a cap, while providing the potential for current income. YBTC is an actively-managed ETF.

YBTC Performance (as of 12/31/24)

	1-Year	Since Inception (01/18/2024)
NAV	N/A	52.76%
Market Price	N/A	54.28%

Performance for periods greater than one year shown annualized.

The performance data quoted represents past performance. Past performance does not guarantee future results. Current performance may be lower or higher than the performance data quoted. The investment return and principal value of an investment will fluctuate so that an investor's shares, when sold or redeemed, may be worth more or less than the original cost. Returns less than one year are not annualized. For the most recent month-end performance, please call (855) 561-5728. You cannot invest directly in an index. Shares are bought and sold at market price (closing price), not net asset value (NAV), and are not individually redeemed from the Fund. Market performance is determined using the bid/ask midpoint at 4:00pm Eastern Time when the NAV is typically calculated. Brokerage commissions will reduce returns. Short-term performance, in particular, is not a good indication of the fund's future performance, and an investment should not be made based solely on returns.

Glossary

Options: An option is a contract sold by one party to another that gives the buyer the right, but not the obligation, to buy (call) or sell (put) a stock at an agreed upon price within a certain period or on a specific date.

Covered Call Strategy: A covered call strategy involves writing (selling) covered call options in return for the receipt of premiums. The seller of the option gives up the opportunity to benefit from price increases in the underlying instrument above the exercise price of the options, but continues to bear the risk of underlying instrument price declines.

Out-of-the-Money Options: Out-of-the-money options are options whose strike price is above the market price of the underlying asset.

The Fund currently expects, but does not guarantee, to make distributions on a weekly basis. These distributions may exceed the Fund's income and gains for the Fund's taxable year. Distributions in excess of the Fund's current and accumulated earnings and profits will be treated as a return of capital. Distributions rates caused by unusually favorable market conditions may not be sustainable. **Such conditions may not continue to exist and there should be no expectation that this performance may be repeated in the future. Please see the Supplemental Tax Information section of the webpage for more information on the distribution composition including the estimated return of capital. Current distributions may include return of capital.**

Investors should consider the investment objectives, risks, charges, and expenses carefully before investing. For a prospectus or summary prospectus, if available, with this and other information about the Fund, please call 1-855-561-5728 or visit our website <https://www.roundhillinvestments.com/etf/YBTC>. Read the prospectus or summary prospectus carefully before investing.

All investing involves risk, including the risk of loss of principal. There is no guarantee the investment strategy will be successful. The fund faces numerous risks, including options risk, liquidity risk, market risk, active management risk, active market risk, clearing member default risk, credit risk, derivatives risk, legislation and litigation risk, operational risk, trading halt risk, valuation risk and non-diversification risk. For a detailed list of fund risks see the prospectus.

Covered Call Strategy Risk. A covered call strategy involves writing (selling) covered call options in return for the receipt of premiums. The seller of the option gives up the opportunity to benefit from price increases in the underlying instrument above the exercise price of the options, but continues to bear the risk of underlying instrument price declines. The premiums received from the options may not be sufficient to offset any losses sustained from underlying instrument price declines, over time. As a result, the risks associated with writing covered call options may be similar to the risks associated with writing put options. Exchanges may suspend the trading of options during periods of abnormal market volatility. Suspension of trading may mean that an option seller is unable to sell options at a time that may be desirable or advantageous to do so.

The covered call strategy utilized by the Fund is “synthetic” because the Fund’s exposure to the price return of the Bitcoin ETFs is derived through options exposure, rather than direct holdings of the shares of the Bitcoin ETFs. Because such exposure is synthetic, it is possible that the Fund’s participation in the price return of the Bitcoin ETFs may not be as precise as if the Fund were directly holding shares of the Bitcoin ETFs.

Bitcoin ETF Risks. The Fund will have significant exposure to the Bitcoin ETFs through its Bitcoin ETF Option positions. Accordingly, the Fund will be subject to the risks of the Bitcoin ETFs, set forth below. In addition to these risks, the Bitcoin ETFs are also subject to the following risks to which the Fund is also subject, which are described within the section entitled “Principal Risks”: Active Market Risk, Asset Class Risk, Concentration Risk, Cybersecurity Risk, Legislation and Litigation Risk, Operational Risk and Structural ETF Risk.

Bitcoin Risk. Bitcoin is a relatively new innovation and the market for bitcoin is subject to rapid price swings, changes and uncertainty. The further development of the Bitcoin network and the acceptance and use of bitcoin are subject to a variety of factors that are difficult to evaluate. The value of bitcoin has been, and may continue to be, substantially dependent on speculation, such that trading and investing in these assets generally may not be based on fundamental analysis. The slowing, stopping or reversing of the development of the Bitcoin network or the acceptance of bitcoin may adversely affect the price of bitcoin. Bitcoin is subject to the risk of fraud, theft, manipulation or security failures, operational or other problems that impact the digital asset trading venues on which bitcoin trades. The Bitcoin blockchain may contain flaws that can be exploited by hackers. A significant portion of bitcoin is held by a small number of holders sometimes referred to as “whales.” Transactions of these holders may influence the price of bitcoin.

Digital Asset Regulatory Risk. There is a lack of consensus regarding the regulation of digital assets, including bitcoin, and their markets. As a result of the growth in the size of the digital asset market, as well as the 2022 Events, the U.S. Congress and a number of U.S. federal and state agencies (including FinCEN, SEC, OCC, CFTC, FINRA, the Consumer Financial Protection Bureau, the Department of Justice, the Department of Homeland Security, the Federal Bureau of Investigation, the Internal Revenue Service, state financial institution regulators, and others) have been examining the operations of digital asset networks, digital asset users and the digital asset markets. Many of these state and federal agencies have brought enforcement actions or issued consumer advisories regarding the risks posed by digital assets to investors. Ongoing and future regulatory actions with respect to digital assets generally or bitcoin in particular may alter, perhaps to a materially adverse extent, the nature of an investment in the shares of a Bitcoin ETF or the ability of the Bitcoin ETF to continue to operate.

Flex Options Risk. Trading FLEX Options involves risks different from, or possibly greater than, the risks associated with investing directly in securities. The Fund may experience losses from specific FLEX Option positions and certain FLEX Option positions may expire worthless. The FLEX Options are listed on an exchange; however, no one can guarantee that a liquid secondary trading market will exist for the FLEX Options. In the event that trading in the FLEX Options is limited or absent, the value of the Fund’s FLEX Options may decrease. In a less liquid market for the FLEX Options, liquidating the FLEX Options may require the payment of a premium (for written FLEX Options) or acceptance of a discounted price (for purchased FLEX Options) and may take longer to complete. A less liquid trading market may adversely impact the value of the FLEX Options and Fund shares and result in the Fund being unable to achieve its investment objective. Less liquidity in the trading of the Fund’s FLEX Options could have an impact on the prices paid or received by the Fund for the FLEX Options in connection with creations and redemptions of the Fund’s shares. Depending on the nature of this impact to pricing, the Fund may be forced to pay more for redemptions (or receive less for creations) than the price at which it currently values the FLEX Options. Such overpayment or under collection could reduce the Fund’s ability to achieve its investment objective. Additionally, in a less liquid market for the FLEX Options, the liquidation of a large number of options may more significantly impact the price. A less liquid trading market may adversely impact the value of the FLEX Options and the value of your investment. The trading in FLEX Options may be less deep and liquid than the market for certain other exchange-traded options, non-customized options or other securities.

Liquidity Risk. The market for Bitcoin ETF Options is still developing and may be subject to periods of illiquidity. During such times it may be difficult or impossible to buy or sell a position at the desired price. Market disruptions or volatility can also make it difficult to find a counterparty willing to transact at a reasonable price and sufficient size. Illiquid markets may cause losses, which could be significant. The large size of the positions which the Fund may acquire increases the risk of illiquidity, may make its positions more difficult to liquidate, and may increase the losses incurred while trying to do so. Such large positions also may impact the price of Bitcoin ETF Options.

New Fund Risk. The fund is new and has a limited operating history.

Distribution Tax Risk. The Fund currently expects to make distributions on a weekly basis. These distributions may exceed the Fund’s income and gains for the Fund’s taxable year. Distributions in excess of the Fund’s current and accumulated earnings and profits will be treated as a return of capital. A return of capital distribution generally will not be taxable but will reduce the shareholder’s cost basis and will result in a higher capital gain or lower capital loss when those Fund Shares on which the distribution was received are sold. Once a Fund shareholder’s cost basis is reduced to zero, further distributions will be treated as capital gain if the Fund shareholder holds Fund Shares as capital assets. Additionally, any capital returned through distributions will be distributed after payment of Fund fees and expenses. Because a portion of the Fund’s distributions may consist of return of capital, the Fund may not be an appropriate investment for investors who do not want their principal investment in the Fund to decrease over time or who do not wish to receive return of capital in a given period. In the event that a shareholder purchases Fund Shares shortly before a distribution by the Fund, the entire distribution may be taxable to the shareholder even though a portion of the distribution effectively represents a return of the purchase price.
