to the**

**Roundhill BIG Bank ETF (BIGB)  
Summary Prospectus, Prospectus, and Statement of Additional Information,  
each dated March 1, 2023, as supplemented**

**Roundhill MEME ETF (MEME)  
Roundhill IO Digital Infrastructure ETF (BYTE)  
Summary Prospectuses, Prospectus, and Statement of Additional Information,  
each dated April 30, 2023, as supplemented**

each, a series of Listed Funds Trust

After careful consideration, and at the recommendation of Roundhill Financial Inc., the investment adviser to the Roundhill BIG Bank ETF, Roundhill MEME ETF and Roundhill IO Digital Infrastructure ETF (each, a “Fund,” and collectively, the “Funds”), the Board of Trustees of Listed Funds Trust approved the closing and subsequent liquidation of the Funds pursuant to the terms of a Plan of Liquidation. Accordingly, the Funds are expected to cease operations, liquidate their assets, and distribute the liquidation proceeds to shareholders of record on or about December 14, 2023 (the “Liquidation Date”). Shares of the Roundhill BIG Bank ETF are listed on The NASDAQ Stock Market, LLC. Shares of the Roundhill MEME ETF and Roundhill IO Digital Infrastructure ETF are listed on the NYSE Arca, Inc.

Beginning on or about November 24, 2023 and continuing through the Liquidation Date, the Funds will liquidate their portfolio assets. As a result, during this period, the Funds will increase their cash holdings and deviate from their investment objectives, investment strategies, and investment policies as stated in the Funds’ Prospectuses and SAIs.

The Funds will no longer accept orders for new creation units after the close of business on the business day prior to the Liquidation Date, and trading in shares of the Funds will be halted prior to market open on the Liquidation Date. Prior to the Liquidation Date, shareholders may only be able to sell their shares to certain broker-dealers, and there is no assurance that there will be a market for the Funds’ shares during that time period. Customary brokerage charges may apply to such transactions.

If no action is taken by a Fund shareholder prior to the Liquidation Date, the Funds will distribute to such shareholder, on or promptly after the Liquidation Date, a liquidating cash distribution equal to the net asset value of the shareholder’s Fund shares as of the close of business on the Liquidation Date. This amount will include any accrued capital gains and dividends. Shareholders remaining in the Funds on the Liquidation Date will not be charged any transaction fees by the Funds. The liquidating cash distribution to shareholders will be treated as payment in exchange for their shares. The liquidation of your shares may be treated as a taxable event. Shareholders should contact their tax adviser to discuss the income tax consequences of the liquidation.

Shareholders can call (800) 617-0004 for additional information.

**Please retain this supplement with your Summary Prospectus, Prospectus, and  
Statement of Additional Information for future reference.**

## Roundhill BIG Bank ETF (BIGB)

Listed on The NASDAQ Stock Market, LLC

Summary Prospectus  
March 13, 2023

[www.roundhillinvestments.com](http://www.roundhillinvestments.com)

Before you invest, you may want to review the Fund’s prospectus and statement of additional information (“SAI”), which contain more information about the Fund and its risks. The current prospectus and SAI dated March 1, 2023, are incorporated by reference into this Summary Prospectus. You can find the Fund’s prospectus, reports to shareholders, and other information about the Fund online at [www.roundhillinvestments.com/etf/BIGB](http://www.roundhillinvestments.com/etf/BIGB). You can also get this information at no cost by calling 1-800-617-0004 or by sending an e-mail request to [ETF@usbank.com](mailto:ETF@usbank.com).

### Investment Objective

The Roundhill BIG Bank ETF (the “Fund”) seeks growth of capital.

### Fees and Expenses of the Fund

This table describes the fees and expenses that you may pay if you buy, hold, and sell shares of the Fund (“Shares”). **You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the table and Example below.**

<b>Shareholder Fees</b> ( <i>fees paid directly from your investment</i> )	None
<b>Annual Fund Operating Expenses</b> ( <i>expenses that you pay each year as a percentage of the value of your investment</i> )	
Management Fee	0.29%
Distribution and/or Service (12b-1) Fees	0.00%
Other Expenses*	0.00%
<b>Total Annual Fund Operating Expenses</b>	<b>0.29%</b>

\* “Other Expenses” are based on estimated amounts for the current fiscal year. In addition, “Other Expenses” does not include fees paid to the Fund’s swap contract or forward contract (collectively, the “Exposure Contracts”) counterparties. These fees and expenses, which are not reflected in this Annual Fund Operating Expenses table, are embedded in the return of the Exposure Contracts (*i.e.*, the fees and expenses reduce the investment return of the Exposure Contracts) and represent an indirect cost of investing in the Fund.

### Example

This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem all of your Shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund’s operating expenses remain the same. The Example does not take into account brokerage commissions that you may pay on your purchases and sales of Shares. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

**1 Year: \$30                      3 Years: \$93**

### Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in the Total Annual Fund Operating Expenses or in the Example, affect the Fund’s performance. Because the Fund is newly organized, portfolio turnover information is not yet available.

### Principal Investment Strategies

The Fund is an actively managed exchange-traded fund (“ETF”) that pursues its investment objective by seeking investment exposure to the largest companies (“Underlying Issuers”) in the Banks Industry and/or Capital Markets Industry (“Bank and Capital Markets Industries”), each an industry defined by an independent industry classification scheme. The Fund generally will offer exposure to between five and ten Underlying Issuers primarily through the use of swap agreements and/or forward contracts. The Fund also may invest directly in the equity securities issued by the Underlying Issuers, such as common stock or American Depositary Receipts

(“ADRs”), or other securities that provide similar exposure to one or more Underlying Issuers when the Adviser believes doing so is in the best interests of the Fund and its shareholders.

Under normal circumstances, the Fund will invest at least 80% of its assets (plus borrowings for investment purposes) in financial instruments and other investments that provide exposure to, or in combination have economic characteristics similar or equivalent to those of, the largest (*i.e.*, top quartile by market capitalization, revenue, profit, market share or other similar metric) companies commonly identified as banks or investment banks and assigned to a bank or capital markets industry, or other industries within a financials sector, as classified by an independent industry classification scheme.

Roundhill Financial Inc. (the “Adviser”), the Fund’s investment adviser, selects the Underlying Issuers for the Fund from a universe comprising the largest companies, measured by market capitalization, in each of the Bank and Capital Markets Industries the shares of which are also listed on a US exchange (including in the form of ADRs). On an annual basis, the Adviser reviews the universe and selects the Underlying Issuers for inclusion in the Fund’s portfolio based on their market capitalization, trading volumes, and sector relevance, in an attempt to identify the largest and most liquid companies representative of the Bank and Capital Markets Industries. The selected Underlying Issuers are then equally weighted in the portfolio. The Adviser generally rebalances the weighting of the Underlying Issuers in the Fund’s portfolio on a quarterly basis.

Exchange Traded Concepts, LLC (the “Sub-Adviser”), the Fund’s sub-adviser, positions the Fund’s portfolio daily to seek to achieve exposure to the Underlying Issuers to the fullest extent possible consistent with the Fund’s investment objective.

As a result of its investment strategies, the Fund will concentrate (*i.e.*, invest more than 25% of its total assets) its investments in one or more of the Bank and Capital Markets Industries at any given time. The Bank and Capital Markets Industries in which the Fund may concentrate may vary over time and from time to time. Additionally, the Fund may invest up to 100% of the Fund’s portfolio in (1) U.S. Government securities, such as bills, notes and bonds issued by the U.S. Treasury; (2) money market funds; and/or (3) short-term bond ETFs.

The Fund is classified as a “non-diversified” investment company under the Investment Company Act of 1940, as amended (the “1940 Act”).

### **Principal Investment Risks**

The principal risks of investing in the Fund are summarized below. The principal risks are presented in alphabetical order to facilitate finding particular risks and comparing them with those of other funds. Each risk summarized below is considered a “principal risk” of investing in the Fund, regardless of the order in which it appears. As with any investment, there is a risk that you could lose all or a portion of your investment in the Fund. Some or all of these risks may adversely affect the Fund’s net asset value (“NAV”), trading price, yield, total return and/or ability to meet its investment objective. The following risks could affect the value of your investment in the Fund:

- **Cash Transaction Risk.** The Fund expects to effect certain creations and redemptions for cash, rather than in-kind securities. The Fund may be required to sell or unwind portfolio investments to obtain the cash needed to distribute redemption proceeds. This may cause the Fund to recognize a capital gain that it might not have recognized if it had made a redemption in kind. As a result, the Fund may pay out higher annual capital gain distributions than if the in-kind redemption process was used. The use of cash creations and redemptions also may cause the Fund’s Shares to trade in the market at wider bid-ask spreads or greater premiums or discounts to the Fund’s NAV. Further, effecting purchases and redemptions primarily in cash may cause the Fund to incur additional costs, such as portfolio transaction costs. These costs can decrease the Fund’s NAV.
- **Concentration Risk.** The Fund expects to have concentrated (*i.e.*, invest more than 25% of its net assets) investment exposure in one or more of the Bank and Capital Markets Industries. Further, the Fund expects to obtain such investment exposure by transacting primarily with a limited number of financial intermediaries conducting business in the same industry or group of related industries. As a result, the Fund is more vulnerable to adverse market, economic, regulatory, political or other developments affecting those industries or groups of related industries than a fund that invests its assets in a more diversified manner.
  - *Banks Industry.* The Banks Industry includes large, geographically diversified banks and regional commercial banks. The Fund is subject to risks faced by companies in the Banks Industry Group, including extensive governmental regulation and/or nationalization that affects the scope of their activities, the prices they can charge and the amount of capital they must maintain; adverse effects on profitability due to increases in interest rates or loan losses (which usually increase in economic downturns, which could lead to insolvency or other negative consequences); severe price competition; economic conditions; credit rating downgrades; and increased inter-industry consolidation and competition. This industry has experienced significant losses in the past, and the impact of more stringent capital requirements and of recent or future regulation on any individual bank or on the industry as a whole cannot be predicted. The Banks Industry is a separate industry within the Financials Sector.

- *Capital Markets Industry.* The Capital Markets Industry includes asset management companies, custody banks, investment banks, brokerages, financial exchanges, and ratings agencies. The Fund is subject to risks faced by companies in the Capital Markets Industry Group, including extensive governmental regulation that affects the scope of their activities, continuing increases in price competition, decreases in fees or fee-related business, including investment banking, brokerage, asset management and other servicing fees, fluctuations in interest rates and other factors which could adversely affect financial markets. This industry has experienced significant losses in the past, and the impact of more stringent capital requirements and of recent or future regulation on any financial institution or on the industry as a whole cannot be predicted. The Capital Markets Industry is a separate industry within the Financials Sector.
- **Counterparty Risk.** Counterparty risk is the risk that a counterparty to Fund transactions (*e.g.*, derivative transactions) will be unable or unwilling to perform its contractual obligation to the Fund. The Fund expects to use derivatives instruments to gain exposure to the Underlying Issuers to seek to achieve its investment objective. Through these investments and related arrangements, the Fund is exposed to the risk that the counterparty may be unwilling or unable to make timely payments or deliver the reference asset contemplated by such arrangements or otherwise to meet its contractual obligations (*i.e.*, counterparty credit risk). If the counterparty becomes bankrupt or defaults on (or otherwise becomes unable or unwilling to perform) its payment, delivery or other obligations to the Fund, the Fund may not receive the full amount it is entitled to receive, may not be able to maintain its desired exposure to the Underlying Issuers, or may experience delays in recovering the collateral or other assets held by, or on behalf of, the counterparty. If this occurs, the value of your Shares in the Fund will decrease.

In addition, the Fund may enter into derivative transactions with a limited number of counterparties, which may increase the Fund's exposure to counterparty credit risk. To the extent the Fund's counterparties are concentrated in the financial services sector, the Fund bears the risk that those counterparties may be adversely affected by legislative or regulatory changes, adverse market conditions, increased competition, and/or wide scale credit losses resulting from financial difficulties or borrowers affecting that economic sector. Further, there is a risk that no suitable counterparties will be willing to enter into, or continue to enter into, transactions with the Fund and, as a result, the Fund may not be able to achieve its investment objective.

- **Cybersecurity Risk.** Cybersecurity incidents may allow an unauthorized party to gain access to Fund assets or proprietary information, or cause the Fund, the Adviser, the Sub-Adviser and/or other service providers (including custodians and financial intermediaries) to suffer data breaches or data corruption. Additionally, cybersecurity failures or breaches of the electronic systems of the Fund, the Adviser, the Sub-Adviser or the Fund's other service providers, market makers, Authorized Participants ("APs"), the Fund's primary listing exchange, or the issuers of securities in which the Fund invests have the ability to disrupt and negatively affect the Fund's business operations, including the ability to purchase and sell Fund Shares, potentially resulting in financial losses to the Fund and its shareholders.
- **Depository Receipt Risk.** Depository receipts, including ADRs, involve risks similar to those associated with investments in foreign securities, such as changes in political or economic conditions of other countries and changes in the exchange rates of foreign currencies. Depository receipts listed on U.S. exchanges are issued by banks or trust companies, and entitle the holder to all dividends and capital gains that are paid out on the underlying foreign shares ("Underlying Shares"). When the Fund invests in depository receipts as a substitute for an investment directly in the Underlying Shares, the Fund is exposed to the risk that the depository receipts may not provide a return that corresponds precisely with that of the Underlying Shares. Because the Underlying Shares trade on foreign exchanges that may be closed when the Fund's primary listing exchange is open, the Fund may experience premiums and discounts greater than those of funds without exposure to such Underlying Shares.
- **Derivatives Risk.** The Fund expects to use swap agreements and forward contracts to seek to achieve its investment objective. The Fund's derivative investments have risks, including the imperfect correlation between the value of such instruments and the reference asset; the loss of principal, including the potential loss of amounts greater than the initial amount invested in the derivatives instrument; and illiquidity of the derivative investments. The Fund expects to primarily utilize derivatives instruments that are not designed to produce leverage. The Fund, however, may invest in derivatives that give rise to economic leverage, but expects any such economic leverage to be minimal. Leverage magnifies the potential for gain and may result in greater losses, which in some cases may cause the Fund to liquidate other portfolio investments at inopportune times (*e.g.*, at a loss to comply with limits on leverage imposed by the 1940 Act or when the Adviser otherwise would have preferred to hold the investment) or to meet redemption requests. Certain of the Fund's transactions in derivatives also could affect the amount, timing, and character of distributions to shareholders, which may result in the Fund realizing more short-term capital gain and ordinary income subject to tax at ordinary income tax rates than it would if it did not engage in such transactions, which may adversely impact the Fund's after-tax returns. Any financing, borrowing or other costs associated with using derivatives also may have the effect of lowering the Fund's return. To the extent the Fund invests in derivatives instruments that give rise to economic leverage, the value of the Fund's portfolio is likely to experience greater volatility over short-term periods.

In addition, the Fund's investments in derivatives are subject to the following risks:

- *Swap Agreements.* Swap agreements are entered into primarily with major financial intermediaries for a specified period which may range from one day to more than one year. In a standard swap transaction, two parties agree to exchange the return (or differentials in rates of return) earned or realized on particular predetermined reference or underlying securities or instruments. The gross return to be exchanged or swapped between the parties is calculated based on a notional amount or the return on or change in value of a particular dollar amount invested in a reference asset. The Fund also will enter into swap agreements that provide for the physical delivery of the reference asset where, instead of exchanging the return earned or realized on the underlying securities, the Fund takes physical delivery of the underlying security. Swap agreements are generally traded over the counter, and therefore, may not receive regulatory protection, which may expose investors, including the Fund, to significant losses.
- *Forwards Contracts.* The primary risks associated with the use of forwards contracts, which may adversely affect the Fund's NAV and total return, are: (a) the imperfect correlation between the change in market value of the forward contract and the price of underlying asset; (b) possible lack of a liquid secondary market for a forwards contract and the resulting inability to close a forwards contract when desired; (c) losses caused by unanticipated market movements, which are potentially unlimited; (d) the possibility that the counterparty will default in the performance of its obligations; and (e) if the Fund has insufficient cash, it may have to sell securities from its portfolio to meet daily variation margin requirements, and the Fund may have to sell securities at a time when it maybe disadvantageous to do so.

The Fund is subject to regulatory constraints relating to the level of leverage risk, as measured by value-at-risk (VaR) testing, the Fund may incur through its derivatives investments. To the extent the Fund exceeds these regulatory constraints regularly or over an extended period, the Fund may determine it is necessary to make adjustments to the Fund's investment strategies to reduce its use of derivatives. Any such adjustments may adversely affect the Fund's ability to achieve its investment objective and its performance.

- **Equity Market Risk.** The equity securities held in the Fund's portfolio may experience sudden, unpredictable drops in value or long periods of decline in value. This may occur because of factors that affect securities markets generally or factors affecting specific issuers, industries, sectors or companies in which the Fund invests. Common stocks are generally exposed to greater risk than other types of securities, such as preferred stocks and debt obligations, because common stockholders generally have inferior rights to receive payment from issuers.
- **Exchange-Traded Fund ("ETF") Risks.** The Fund is an ETF, and, as a result of its structure, it is exposed to the following risks:
  - *Authorized Participants, Market Makers, and Liquidity Providers Concentration Risk.* The Fund has a limited number of financial institutions that may act as APs. In addition, there may be a limited number of market makers and/or liquidity providers in the marketplace. Shares may trade at a material discount to NAV and possibly face delisting if either: (i) APs exit the business or otherwise become unable to process creation and/or redemption orders and no other APs step forward to perform these services, or (ii) market makers and/or liquidity providers exit the business or significantly reduce their business activities and no other entities step forward to perform their functions.
  - *Costs of Buying or Selling Shares Risk.* Due to the costs of buying or selling Shares, including brokerage commissions imposed by brokers and bid/ask spreads, frequent trading of Shares may significantly reduce investment results and an investment in Shares may not be advisable for investors who anticipate regularly making small investments.
  - *Shares May Trade at Prices Other Than NAV Risk.* As with all ETFs, Shares may be bought and sold in the secondary market at market prices. Although it is expected that the market price of Shares will approximate the Fund's NAV, there may be times when the market price of Shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount) due to supply and demand of Shares or during periods of market volatility. This risk is heightened in times of market volatility, periods of steep market declines, and periods when there is limited trading activity for Shares in the secondary market, in which case such premiums or discounts may be significant.
  - *Trading Risk.* Although Shares are listed for trading on The NASDAQ Stock Market, LLC (the "Exchange") and may be traded on U.S. exchanges other than the Exchange, there can be no assurance that Shares will trade with any volume, or at all, on any stock exchange. In stressed market conditions, the liquidity of Shares may begin to mirror the liquidity of the Fund's underlying portfolio holdings, which can be significantly less liquid than the Shares.
- **Fixed Income Risk.** Fixed income securities are subject to call, credit, extension, and interest rate risk.
  - *Call Risk.* During periods of falling interest rates, an issuer of a callable bond held by the Fund may "call" or repay the security before its stated maturity, and the Fund may have to reinvest the proceeds at lower interest rates, resulting in a decline in the Fund's income.

- *Credit Risk.* An issuer of a fixed income security, such as a corporate bond, may be unable or unwilling to make interest and principal payments when due. The Fund also is subject to the related risk that the value of a fixed income security may decline because of concerns about the issuer’s creditworthiness. Credit risk is heightened to the extent the Fund invests in below investment-grade securities, which also are referred to as high-yield securities or junk bonds.
- *Extension Risk.* During periods of rising interest rates, certain debt obligations will be paid off substantially more slowly than originally anticipated and the value of those securities may fall sharply, resulting in a decline in the Fund’s income and potentially in the value of the Fund’s investments.
- *Interest Rate Risk.* An increase in interest rates may cause the value of fixed-income securities held by the Fund to decline. The Fund may be subject to a greater risk of rising interest rates due to the recent historically low rates and the effect of potential government fiscal policy initiatives and resulting market reaction to those initiatives. Variable and floating rate securities may increase or decrease in value in response to changes in interest rates, although generally to a lesser degree than fixed-income securities.
- **Foreign Securities Risk.** Investments in non-U.S. securities involve certain risks that may not be present with investments in U.S. securities. For example, investments in non-U.S. securities may be subject to risk of loss due to foreign currency fluctuations or to political or economic instability. There may be less information publicly available about a non-U.S. issuer than a U.S. issuer. Non-U.S. issuers may be subject to different accounting, auditing, financial reporting and investor protection standards than U.S. issuers. Investments in non-U.S. securities also may be subject to withholding or other taxes and may be subject to additional trading, settlement, custodial, and operational risks. With respect to certain countries, there is the possibility of government intervention and expropriation or nationalization of assets. Because legal systems differ, there also is the possibility that it will be difficult to obtain or enforce legal judgments in certain countries. Since foreign exchanges may be open on days when the Fund does not price its shares, the value of the securities in the Fund’s portfolio may change on days when shareholders will not be able to purchase or sell the Fund’s shares. Conversely, Shares may trade on days when foreign exchanges are closed. Each of these factors can make investments in the Fund more volatile and potentially less liquid than other types of investments.
- **Investment Company Risk.** The risks of investing in investment companies, such as ETFs, typically reflect the risks of the types of instruments in which the investment companies invest. By investing in another investment company, the Fund becomes a shareholder of that investment company and bears its proportionate share of the fees and expenses of the other investment company. The Fund may be subject to statutory limits with respect to the amount it can invest in other ETFs, which may adversely affect the Fund’s ability to achieve its investment objective. ETFs may be less liquid than other investments, and thus their share values more volatile than the values of the investments they hold. Investments in ETFs are also subject to the “ETF Risks” described above.
- **Large-Capitalization Risk.** The securities of large-capitalization companies may be relatively mature compared to smaller companies and therefore subject to slower growth during times of economic expansion. Large-capitalization companies also may be unable to respond quickly to new competitive challenges, such as changes in technology and consumer tastes.
- **Liquidity and Valuation Risk.** It may be difficult for the Fund to purchase and sell particular investments within a reasonable time at a fair price, or the price at which it has been valued by the Adviser for purposes of the Fund’s NAV, causing the Fund to be less liquid and unable to realize what the Adviser believes should be the price of the investment. Valuation of portfolio investments may be difficult, such as during periods of market turmoil or reduced liquidity, and for investments that may, for example, trade infrequently or irregularly. In these and other circumstances, an investment may be valued using fair value methodologies, which are inherently subjective, reflect good faith judgments based on available information and may not accurately estimate the price at which the Fund could sell the investment at that time.
- **Management Risk.** The Fund is actively managed and may not meet its investment objective based on the Adviser’s and Sub-Adviser’s success or failure to implement the Fund’s strategies and to efficiently execute investment transactions, respectively. The Fund invests in derivatives instruments, which may create enhanced risks for the Fund and the Adviser’s ability to control the Fund’s level of risk will depend on the Adviser’s skill in managing such instruments. In addition, the Adviser’s evaluations and assumptions regarding investments, interest rates, inflation, and other factors may not successfully achieve the Fund’s investment objective given actual market conditions.
- **Market Risk.** The trading prices of securities and other instruments fluctuate in response to a variety of factors. These factors include events impacting the entire market or specific market segments, such as political, market and economic developments, as well as events that impact specific issuers. The Fund’s NAV and market price, like security and commodity prices generally, may fluctuate significantly in response to these and other factors. As a result, an investor could lose money over short or long periods of time. U.S. and international markets have experienced significant periods of volatility in recent years due to a number of these factors, including the impact of the COVID-19 pandemic and related public health issues, growth concerns in the U.S. and overseas, uncertainties regarding interest rates, trade tensions and the threat of tariffs imposed by the U.S. and other countries. In

addition, local, regional or global events such as war, including Russia's invasion of Ukraine, acts of terrorism, spread of infectious diseases or other public health issues, recessions, rising inflation, or other events could have a significant negative impact on the Fund and its investments. These developments as well as other events could result in further market volatility and negatively affect financial asset prices, the liquidity of certain securities and the normal operations of securities exchanges and other markets. It is unknown how long circumstances related to the COVID-19 pandemic will persist, whether they will reoccur in the future, whether efforts to support the economy and financial markets will be successful, and what additional implications may follow from the pandemic. The impact of these events and other epidemics or pandemics in the future could adversely affect Fund performance.

- **Money Market Instrument Risk.** The Fund may use a variety of money market instruments for cash management purposes, including money market funds, depository accounts and repurchase agreements. Money market funds may be subject to credit risk with respect to the debt instruments in which they invest. Depository accounts may be subject to credit risk with respect to the financial institution in which the depository account is held. Money market instruments may lose money.
- **New Fund Risk.** The Fund is a recently organized investment company with no operating history. As a result, prospective investors have no track record or history on which to base their investment decision.
- **Non-Diversification Risk.** Because the Fund is "non-diversified," it may invest a greater percentage of its assets in the securities of a single issuer or a lesser number of issuers than if it was a diversified fund. As a result, the Fund may be more exposed to the risks associated with and developments affecting an individual issuer or a lesser number of issuers than a fund that invests more widely. This may increase the Fund's volatility and cause the performance of a relatively small number of issuers to have a greater impact on the Fund's performance.
- **Sector Risk.** To the extent the Fund invests more heavily in particular sectors of the economy, its performance will be especially sensitive to developments that significantly affect those sectors. The Fund may invest a significant portion of its assets in the following sector and, therefore, the performance of the Fund could be negatively impacted by events affecting this sector.
  - *Financials Sector Risk.* The Fund's investments are exposed to issuers conducting business in the Financials Sector. The Financials Sector includes companies involved in banking, thrifts & mortgage finance, specialized finance, consumer finance, asset management and custody banks, investment banking and brokerage and insurance. It also includes Financial Exchanges & Data and Mortgage REITs. The Fund is subject to the risk that the securities of such issuers may be significantly affected by changes in interest rates, government regulation, the rate of defaults on corporate, consumer and government debt, the availability and cost of capital, and fallout from the housing and sub-prime mortgage crisis. Banks and capital markets companies, in particular, may be significantly affected by changes in interest rates, catastrophic events, price and market competition, or other changes in government regulation or tax law and/or rate regulation, which may have an adverse impact on their profitability. This sector has experienced significant losses in the recent past, and the impact of more stringent capital requirements and of recent or future regulation on any individual financial company or on the sector as a whole cannot be predicted. In recent years, cyber-attacks and technology malfunctions and failures have become increasingly frequent in this sector and have caused significant losses.
- **Tax Risk.** In order to qualify for the favorable tax treatment generally available to a regulated investment company ("RIC"), the Fund must satisfy certain diversification and other requirements. In particular, at each quarter end (a) at least 50% of the value of the Fund's total assets must generally be represented by cash and cash items, U.S. government securities, securities of other RICs and other securities, with such other securities limited, in respect to any one issuer, to an amount not greater than 5% of the value of the Fund's total assets and that does not represent more than 10% of the outstanding voting securities of such issuer, and (b) not more than 25% of the value of the Fund's total assets is invested in the securities (other than U.S. government securities or the securities of other RICs) of any one issuer or the securities (other than the securities of another RIC) of two or more issuers that the Fund controls and which are engaged in the same or similar trades or businesses or related trades or businesses, or the securities of one or more qualified publicly traded partnerships (the "Diversification Requirement"). The Fund anticipates gaining exposure to between five and ten Underlying Issuers. To satisfy the Diversification Requirement, the Fund will gain exposure to the Underlying Issuers by entering into swap agreements and forward contracts (derivatives instruments) or by investing in equity securities of an Underlying Issuer. The determination of the value and the identity of the issuer of derivative investments is often unclear for purposes of the Diversification Requirement described above. Although the Fund intends to carefully monitor its investments to ensure that it is adequately diversified under the Diversification Requirement, there are no assurances that the Internal Revenue Service ("IRS") will agree with the Fund's determination of the issuer and valuation under the Diversification Requirement with respect to such derivatives instruments as the application of the Diversification Requirements to derivative investments is often unclear. The Fund's efforts to satisfy the Diversification Requirement may affect the Fund's execution of its investment strategy. If the Fund fails to qualify as a RIC, it would be taxed in the same manner as an ordinary corporation subject to U.S. federal income tax on all its income at the fund level (unless certain relief provisions are available.) The resulting taxes could substantially reduce the Fund's net assets and the amount of income available for distribution to shareholders. In addition,

in order to requalify as a RIC, the Fund could be required to recognize unrealized gains, pay substantial taxes and interest, and make certain distributions. In addition, the Fund's use of derivatives may cause the Fund to realize higher amounts of short-term capital gains or otherwise affect the Fund's ability to pay out dividends subject to preferential rates or the dividends received deduction, thereby increasing the amount of taxes payable by some shareholders. Please see the section entitled "Federal Income Taxes – Taxation of the Funds in the SAI for more information.

- **U.S. Government Securities Risk.** U.S. government securities may or may not be backed by the full faith and credit of the U.S. government. U.S. government securities are subject to the risks associated with fixed-income and debt securities, particularly interest rate risk and credit risk.

## **Performance**

The Fund is new and therefore does not have a performance history for a full calendar year. In the future, performance information for the Fund will be presented in this section. Updated performance information when available, can be found on the Fund's website at [www.roundhillinvestments.com](http://www.roundhillinvestments.com).

## **Portfolio Management**

<b>Adviser</b>	Roundhill Financial Inc.
<b>Sub-Adviser</b>	Exchange Traded Concepts, LLC
<b>Portfolio Managers</b>	Will Hershey and Timothy Maloney, each a portfolio manager for the Adviser, and Andrew Serowik, Todd Alberico, and Gabriel Tan, each a portfolio manager for the Sub-Adviser, have been portfolio managers of the Fund since its inception in March, 2023

## **Purchase and Sale of Shares**

The Fund issues and redeems Shares at NAV only in large blocks known as "Creation Units," which only APs (typically, broker-dealers) may purchase or redeem. The Fund generally issues and redeems Creation Units in exchange for a portfolio of securities and/or a designated amount of U.S. cash.

Shares are listed on the Exchange, and individual Shares may only be bought and sold in the secondary market through a broker or dealer at market prices, rather than NAV. Because Shares trade at market prices rather than NAV, Shares may trade at a price greater than NAV (premium) or less than NAV (discount).

An investor may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase Shares (the "bid" price) and the lowest price a seller is willing to accept for Shares (the "ask" price) when buying or selling Shares in the secondary market. The difference in the bid and ask prices is referred to as the "bid-ask spread."

Recent information regarding the Fund's NAV, market price, how often Shares traded on the Exchange at a premium or discount, and bid-ask spreads can be found on the Fund's website at [www.roundhillinvestments.com](http://www.roundhillinvestments.com).

## **Tax Information**

The Fund's distributions are generally taxable as ordinary income, qualified dividend income, or capital gains (or a combination), unless your investment is in an individual retirement account ("IRA") or other tax-advantaged account. Distributions on investments made through tax-deferred arrangements may be taxed later upon withdrawal of assets from those accounts.

## **Financial Intermediary Compensation**

If you purchase Shares through a broker-dealer or other financial intermediary (such as a bank) (an "Intermediary"), the Adviser or its affiliates may pay Intermediaries for certain activities related to the Fund, including participation in activities that are designed to make Intermediaries more knowledgeable about exchange-traded products, including the Fund, or for other activities, such as marketing, educational training or other initiatives related to the sale or promotion of Shares. These payments may create a conflict of interest by influencing the Intermediary and your salesperson to recommend the Fund over another investment. Any such arrangements do not result in increased Fund expenses. Ask your salesperson or visit the Intermediary's website for more information.
