

Why Invest in YBTC?

High Income Potential: YBTC seeks to generate monthly income through a covered call strategy on bitcoin*, which has historically offered significant option premiums.

Exposure to Bitcoin: YBTC offers upside exposure to bitcoin*, subject to a monthly cap.

Actively Managed: YBTC implements a covered call strategy, saving investors the time and expense of trading options themselves.

Fund Details

Fund Ticker	YBTC
Exchange	CBOE
CUSIP	53656F417
Expense Ratio	0.95%
AUM	\$2.5MM
Shares Outstanding	50,000
Inception Date	1 / 18 / 2024

YBTC Performance (as of 01/18/24)

	1-Year	Since Inception (01/18/2024)
NAV	N/A	N/A
Market Price	N/A	N/A

Performance for periods greater than one year shown annualized.

The performance data quoted represents past performance. Past performance does not guarantee future results. Current performance may be lower or higher than the performance data quoted. The investment return and principal value of an investment will fluctuate so that an investor’s shares, when sold or redeemed, may be worth more or less than the original cost. Returns less than one year are not annualized. For the most recent month-end performance, please call (855) 561-5728. You cannot invest directly in an index. Shares are bought and sold at market price (closing price), not net asset value (NAV), and are not individually redeemed from the Fund. Market performance is determined using the bid/ask midpoint at 4:00pm Eastern Time when the NAV is typically calculated. Brokerage commissions will reduce returns. Short-term performance, in particular, is not a good indication of the fund’s future performance, and an investment should not be made based solely on returns.

Expense Ratio	0.95%

Investors should consider the investment objectives, risks, charges, and expenses carefully before investing. For a prospectus or summary prospectus, if available, with this and other information about the Fund, please call 1-855-561-5728 or visit our website at <https://www.roundhillinvestments.com/etf/>. Read the prospectus or summary prospectus carefully before investing.

All investing involves risk, including the risk of loss of principal. There is no guarantee the investment strategy will be successful. The fund faces numerous risks, including options risk, liquidity risk, market risk, cost of futures investment risk, clearing broker risk, commodity regulatory risk, futures contract risk, active management risk, active market risk, clearing broker risk, credit risk, derivatives risk, legislation and litigation risk, operational risk, trading issues risk, valuation risk and non-diversification risk. For a detailed list of fund risks see the prospectus.

Covered Call Strategy Risk. A covered call strategy involves writing (selling) covered call options in return for the receipt of premiums. The seller of the option gives up the opportunity to benefit from price increases in the underlying instrument above the exercise price of the options, but continues to bear the risk of underlying instrument price declines. The premiums received from the options may not be sufficient to offset any losses sustained from underlying instrument price declines, over time. As a result, the risks associated with writing covered call options may be similar to the risks associated with writing put options. Exchanges may suspend the trading of options during periods of abnormal market volatility. Suspension of trading may mean that an option seller is unable to sell options at a time that may be desirable or advantageous to do. **Bitcoin Futures ETF Risks.** The Fund will have significant exposure to the Bitcoin Futures ETF through its options positions that utilize the Bitcoin Futures ETF as the reference asset. Accordingly, the Fund will be subject to the risks of the Bitcoin Futures ETF, set forth below. **Bitcoin Risk.** Bitcoin is a relatively new innovation and the market for bitcoin is subject to rapid price swings, changes and uncertainty. The further development of the Bitcoin network and the acceptance and use of bitcoin are subject to a variety of factors that are difficult to evaluate. The slowing, stopping or reversing of the development of the Bitcoin network or the acceptance of bitcoin may adversely affect the price of bitcoin. Bitcoin is subject to the risk of fraud, theft, manipulation or security failures, operational or other problems that impact the digital asset trading venues on which bitcoin trades. The Bitcoin blockchain may contain flaws that can be exploited by hackers. A significant portion of bitcoin is held by a small number of holders sometimes referred to as “whales.” Transactions of these holders may influence the price of bitcoin. **Digital Asset Industry Risk.** The digital asset industry is a new, speculative, and still-developing industry that faces many risks. In this emerging environment, events that are not directly related to the security or utility of the Ethereum blockchain or the Bitcoin blockchain can nonetheless precipitate a significant decline in the price of ether and bitcoin. **Digital Asset Regulatory Risk.** Digital asset markets in the U.S. exist in a state of regulatory uncertainty, and adverse legislative or regulatory developments could significantly harm the value of bitcoin futures contracts or the Bitcoin Futures ETF’s share, such as by banning, restricting or imposing onerous conditions or prohibitions on the use of bitcoin, mining activity, digital wallets, the provision of services related to trading and custodying digital assets, the operation of the Bitcoin network, or the digital asset markets generally. Such occurrences could also impair the Bitcoin Futures ETF’s ability to meet its investment objective pursuant to its investment strategy. **Flex Options Risk.** The Fund will utilize FLEX Options issued and guaranteed for settlement by the Options Clearing Corporation (OCC). In the unlikely event that the OCC becomes insolvent or is otherwise unable to meet its settlement obligations, the Fund could suffer significant losses. Additionally, FLEX Options may be less liquid than standard options. In a less liquid market for the FLEX Options, the Fund may have difficulty closing out certain FLEX Options positions at desired times and prices. The values of FLEX Options do not increase or decrease at the same rate as the reference asset and may vary due to factors other than the price of reference asset. **New Fund Risk.** The fund is new and has a limited operating history.

Roundhill Financial Inc. serves as the investment advisor. The Funds are distributed by Foreside Fund Services, LLC which is not affiliated with Roundhill Financial Inc., U.S. Bank, or any of their affiliates.

Glossary

Options

An option is a contract sold by one party to another that gives the buyer the right, but not the obligation, to buy (call) or sell (put) a stock at an agreed upon price within a certain period or on a specific date.

Covered Call Strategy

A covered call strategy involves writing (selling) covered call options in return for the receipt of premiums. The seller of the option gives up the opportunity to benefit from price increases in the underlying instrument above the exercise price of the options, but continues to bear the risk of underlying instrument price declines.

Out-of-the-Money Options: Out-of-the-money options are options whose strike price is above the market price of the underlying asset.
